

Erskine Bridge Pipeline Replacement Project

As part of our Erskine Bridge pipeline replacement project we are planning to carry out works on 23 and 24 May which will, for a short time, include the safe release of a large volume of natural gas venting into the atmosphere.

This planned operation will be carried out in a safe and controlled manner but you may hear noise from the venting operation or smell gas as a result.

If you do smell gas or have any gas safety concerns, please call the national gas emergency number on 0800 111 999.
